POPULATION OF THE COUNTRIES OF THE SINO-SOVIET BLOC
SELECTED YEARS, 1938-75

Introduction

This publication presents population estimates and projections for the countries of the Sino-Soviet Bloc for selected years, 1938-75. These estimates and projections, which supersede those published in EIC-SR-5 (July 1960), are basic statistics of the intelligence community as established formally through the Subcommittee on Population and Manpower of the Economic Intelligence Committee (EIC). The members of the Subcommittee include representatives of the Department of the Air Force, the Department of the Army, the Department of Commerce, the Department of Labor, the Department of State, and the Central Intelligence Agency. The respective member agencies, in some areas, may have different statistics to meet individual requirements, but ~~this~~ *these differences* ^{do} ~~does~~ not affect the validity of the community-established statistics for general usage. *then* [^]

Estimates of the total population in each country for selected years, 1938-60, are shown in Tables 1 and 2, and projections for selected years, 1961-75, are shown in Tables 3 and 4. The estimates for the USSR and the European Satellites are considered to be more reliable than those for the Asian Communist countries. For the USSR and the European Satellites, the estimates either were obtained directly from censuses, yearbooks, and statistical journals of the countries concerned and from publications of the United Nations or were derived from these materials. For the Asian countries, only fragmentary data are available, and the methods by which estimates for these countries were made are discussed in the Appendix. The population projections shown in Tables 3 and 4 are based on assumptions that are stated in the Appendix.

BECAUSE OF ROUNDING, COMPONENTS MAY NOT ADD TO THE TOTAL SHOWN.

1938, prewar boundaries: US Bureau of the Census, Population Estimates and Projections for Selected Countries 1955 to 1959, International Population Reports, Series P-51, No. 4, 21 October 1957.

1939, postwar boundaries: Based on a 1939 estimate of 190.7 million reported in Tsentral'noye Statisticheskoye Upravleniye pri Sovete Ministrov SSSR, Narodnoye Khozyaystvo SSSR v 1939 godu, Statisticheskii Letopisnik (The National Economy of the USSR in 1939, a Statistical Yearbook), Moscow, 1960, p. 9. This figure is stated to be as of January 17, 1939, and applies to the prewar territory plus Estonia, Latvia, Lithuania, the territory gained from Rumania, and the net territory gained from Poland. Presumably excluded is the population in the territories which were acquired from Finland, Germany, Czechoslovakia, Japan, and Mongolia. About 3 million persons lived in these territories in 1939.

1945: Estimated.

1950-59: Estimated. The census of 15 January 1959 was used as the base. Officially reported birth rates for the period were accepted, but reported death rates were adjusted upward by about 15 percent because age-specific mortality rates for 1958 were so low as to suggest underregistration of deaths particularly in the older age groups. Migration (which was small) was disregarded.

1960-75: Projection based on the assumptions that mortality will decline, that fertility will remain at the 1958 level (gross reproduction rate = 1.38), and that there will be no migration. The figures do not agree with the official Soviet estimates of 212.3 million for January 1, 1960, and 214.1 million for July 1, 1960, published in 1961, p. 7, nor with the official estimate of 216.0 million for January 1, 1961, published in "Ob Itogakh Vypolneniya Gosudarstvennogo Plana Razvitiya Narodnogo Khozyaystva SSSR v 1960 godu" ("On the Fulfillment of the State Plan for the Development of the National Economy of the USSR in 1960," Vestnik statistiki (Statistical Herald), no. 2, 1961, p. 22. These differences of from 0.1 million to 0.4 million stem mainly from the acceptance of a somewhat higher death rate than that officially reported.

European Satellites

Albania

1938: United Nations, Monthly Bulletin of Statistics, January 1958.

1945 and 1950-59: United Nations, Monthly Bulletin of Statistics, March 1961.

1960-75: Projection based on the assumptions that mortality will decline, that fertility will remain constant at the 1950-54 level (gross reproduction rate = 2.50) and that there will be no migration. The population on which the projections are based is consistent with the preliminary total of 1,625,000 for the census of 2 October 1960.

Bulgaria

1938, prewar boundaries; 1945, and 1950-60: Tsentral'no Statisticheskoye Upravleniye pri Narodnoy Sovete, Statisticheskii Godishnik na Narodna Republika Bulgariya, 1960 (Statistical Yearbook for the Bulgarian People's Republic, 1960), Sofia, 1960, p. 18.

APPENDIX

METHODOLOGY

through

The following notes give separately the sources, methods, and assumptions on which are based the population estimates and projections for each country of the Sino-Soviet Bloc as shown in Tables 1 to 4. All relevant official data -- that is, data released by the respective governments -- were used in making these estimates, and no official data were rejected unless specifically noted. For the European Satellites, the estimates for 1938-59 (except for 1945, for which see below) are official data or official data adjusted to 1 January and 1 July of each year. For the USSR, the estimates for these years are based on data and interpolations from the censuses of 1939 and 1959.

through

For the Asian Communist countries, official data either are not available in detail or are not reliable. In Communist China, for example, the population figures officially reported for 1949-58 are inconsistent with birth and death rates also reported for these years and with age and sex data from the census of 1953. The estimates and projections for China shown in Tables 1 to 4 are based on the total population reported in the 1953 census and on assumed rates of increase that are consistent with China's demographic history. It should be noted, however, that competent demographers question the accuracy of the 1953 census and have made estimates that differ by as much as 20 million (about 3 percent) from the estimates presented here.

For all countries, the estimates for 1945 are less reliable than those for other years because birth and death rates for the war and early postwar years have not been reported and because reliable data on migration during these years are not available.

~~1938, prewar boundaries: US Bureau of the Census, Population Estimates and Projections for Selected Countries 1955 to 1959, International Population Reports, Series P-95, No. 4, 21 October 1957.~~

~~1938, postwar boundaries: Based on a 1939 estimate of 190.7 million reported in Tsentral'noye Statisticheskoye Upravleniye pri Sovete Ministrov SSSR, Narodnoye Khozyaystvo SSSR v 1959 godu, Statisticheskiy Yechebnik (The National Economy of the USSR in 1959, a Statistical Yearbook), Moscow, 1960, p. 9. This figure is stated to be as of~~

C-O-N-F-I-D-E-N-T-I-A-L

1938, postwar boundaries: US Bureau of the Census, Population Estimates and Projections for Selected Countries 1955 to 1959, International Population Reports, Series P-91, No. 4, 21 October 1957.

1961-75: Projection based on the assumptions that mortality will decline, that fertility will remain constant at the 1959 level (gross reproduction rate = 107), and that there will be no migration.

Czechoslovakia

1938, prewar boundaries: Publication No. 74 of the Social Institute of the Czechoslovak Republic, Twenty Years of Social Welfare in the Czechoslovak Republic (1938), p. 9.

1938, postwar boundaries: 1945 and 1950-60: Statni Urad Statisticky, Statisticka Rocenka Republiky Cechoslovenske 1960 (Statistical Yearbook of the Czechoslovak Republic, 1960), Prague, 1960, pp. 56 and 62.

1961: Statni Urad Statisticky, Statistické Zprávy (Statistical Reports), No. 12, 1960.

1962-75: Projection based on the assumptions that mortality will decline, that fertility will decline from its 1959 level (gross reproduction rate = 115) until 1966 (when the gross reproduction rate will stabilize at 100), and that there will be no migration.

East Germany

1938, prewar boundaries: This figure represents the population of the present territory of East Germany plus the former German territory now under Polish and Soviet administration. The number, shown solely for convenience, was derived by subtracting the 1938 population of the area that is now West Germany plus West Berlin from the 1938 population of prewar Germany.

1938, postwar boundaries, and 1950-60: Staatliche Zentralverwaltung fuer Statistik, Statistisches Jahrbuch der Deutschen Demokratischen Republik, 1959 (Statistical Yearbook of the German Democratic Republic, 1959), Berlin, 1960, pp. 26 and 38.

1945: Estimated on the basis of a population of 18,057,000 reported for midyear 1946 (p. 17), on reported births and deaths in 1946, and on an adjustment for unrecorded migration from Poland.

1961-75: Projection based on the assumptions that mortality will decline, that fertility will remain constant at the 1959 level (gross reproduction rate = 115), and that net migration will decline. On the basis of partial West German data, it was estimated that net emigration amounted to 140,000 during 1960. It was assumed that this level of emigration continued during 1961 and declined by 10,000 each year thereafter — reaching 10,000 during 1974. It was further assumed that net emigration would remain at 10,000 during 1975.

Hungary

1938, and 1950-60: Központi Statisztikai Hivatal, Magyarország 1959 (Hungarian Demography, 1959), Budapest, 1961, p. 21.

1945: US Bureau of the Census, The Population of Hungary, by Jacob S. Siegel, International Population Statistics Reports, P-90, No. 9, Table 6. The figure for 1945 is not an official figure, but was adjusted to account more carefully for postwar migrations than official data.

1961-75: Projection based on the assumptions that mortality will decline, that fertility will remain constant at the 1959 level (gross reproduction rate = 100), and that there will be no migration.

Poland

1938, prewar boundaries: United Nations, Monthly Bulletin of Statistics, January 1958.

1938, postwar boundaries: Based on an officially reported population of 32.1 million for 1 January 1939 and a natural rate of increase of 10.7 persons per 1,000 population reported for 1938.

1945: Estimated. It is not known precisely what population movements occurred in Poland between 1945 and the date of the census in February 1946. The population enumerated in 1946 was 23.9 million. The Statistical Yearbook of Poland, 1947 (pp. 28-30) gives some data on the movement of population from the west into Poland and between Poland and areas of the USSR. Data on the transfer of Germans from Poland, on the other hand, begin only in 1946. If only the data ~~which~~ are available are utilized, the estimate of Poland's midyear 1945 ~~the~~ population would be approximately 23 million. This figure should be higher by the amount of westward movement from the Western Territories of Poland, which was probably 2 million persons or more between 1 July 1945 and February 1946. The figure of 25.0 million used here reflects that movement.

1950-60: Główny Urząd Statystyczny Polskiej Rzeczypospolitej Ludowej, Rocznik Statystyczny, 1960 (Statistical Yearbook, 1960), p. 13.

The preliminary results of the census of 6 December 1960 show a total population of 29,731,000. The estimate for 30 September 1960 (based on population registration) was reported to be 29,807,000, Buletyn Statystyczny (Statistical Bulletin), No. 12, 1960, p. 7. Projection of this population to 6 December yields an estimate of 29,872,000, ~~is~~ (141,000 more than the preliminary census total). The estimates for 1960 and earlier are consistent with the 30 September estimate and have not been adjusted to reflect the discrepancy between this estimate and the census total.

1961-75: Projection based on the assumptions that mortality will decline, that fertility will remain constant at the 1950 level (gross reproduction rate = 140), and that there will be no migration. The population on which the projections are based is consistent with the preliminary total of 29,731,000 for the census of 6 December 1960.

Rumania

1938, prewar boundaries: Institutul Central de Statistica, Comunicari Statistice (Statistical Reports), No. 18, 15 August 1947, p. 7.

1938, postwar boundaries; 1945; and 1950-58: Directia Centrala de Statistica, Anuarul Statistic al RPR, 1959 (Statistical Yearbook of the RPR, 1959), Bucharest, 1959, p. 76.

1959: United Nations, Monthly Bulletin of Statistics, March 1961.

1960-75: Based on projection series (C) given in US Bureau of the Census, Projections of the Population of Rumania by Age and Sex: 1960-1976, International Population Reports, P-91, No. 10. This projection series is based on the assumptions that mortality will decline, that fertility will decline from its 1958 level (gross reproduction rate = 130) until 1966 (when the gross reproduction rate will stabilize at 115), and that there will be no migration.

Asian Communist Countries

Communist China

1938, 1945, and 1950-58: Estimated. ~~The~~ census of 30 June 1953 ~~was~~ used as the base. Because of inconsistencies between the officially announced population totals and officially announced birth and death rates, the population estimates were based on the following assumed average annual vital rates: ~~1938-1944~~ ~~1945-1949~~ ~~1950-1953~~ ~~1954-1958~~ ~~1959-1960~~ ~~1961-1965~~ ~~1966-1970~~ ~~1971-1975~~ ~~1976-1980~~ ~~1981-1985~~ ~~1986-1990~~ ~~1991-1995~~ Number of Persons per 1,000 Population

<u>Years</u>	<u>Birth Rate</u>	<u>Death Rate</u>	<u>Rate of Increase</u>
1938-48	42.5	32.5	10.0
1948-53	45.1	26.0	19.1
1953-58	43.8	19.7	24.1

It was assumed that the actual birth rate was 45.0 per 1,000 before 1948 but that infanticide lowered the effective birth rate to 42.5.

1959-61: Projection based on the assumption that natural increase fell from 25.2 per 1,000 in 1958 to 20.0 per 1,000 in 1961 as a result of higher mortality caused by acute food shortages in many areas since 1958.

1962-75: Projection based on the assumption that the average annual increase rate will be 20.0 per 1,000 and there will be no migration. The assumption as to natural increase is arbitrary and does not involve specific conclusions about underlying demographic and economic developments during this period.

pri' Sovets' Ministrov SSSR,

North Korea

1938: Estimated. Based on the censuses of 1935 and 1940.

1945: Estimated. Interpolated from the results of the census of 1941 and the figure of 9,702,000 for 1947 given in Tsentral'noye Statisticheskoye Upravleniye. Narodnaya Khozyaystvo SSSR v 1956 godu (National Economy of the USSR in 1956) Moscow, 1957.

1955: Estimated. Interpolated from total population figures for 1953 and 1956 derived from total and per capita production figures for coal and electricity given in the 1957 North Korean Central Yearbook (Joint Publications Research Service, Information from the 1959 North Korean Central Yearbook, JPRS 2691).

1950-54: Estimated. Based on the assumptions (1) that emigration compensated for natural increase in 1949-50; (2) that most of the war deaths and emigration occurred in 1950-51; (3) that war deaths and emigration exceeded natural increase in 1951-52; (4) that recovery was rapid after 1952, so that the average annual rate of increase for 1952-55 was about 20 per 1,000 population.

1956-75: Projection based on the assumptions (1) that natural increase rises from 25.0 per 1,000 in 1955 to 27.5 per 1,000 between 1955 and 1960, which is generally consistent with the trend of the official figures, and will remain constant thereafter; and (2) that net migration added from 25,000 to 100,000 persons per year to the population from 1954 through 1962 but that net migration ceases to be a factor after 1962.

North Vietnam

1938: Estimated. Based on the assumptions that the administrative enumeration in 1943 (enumerated population in North Vietnam: 12,966,000 -- Institut de la Statistique et des Etudes Economiques, Annuaire Statistique de Vietnam / Statistical Yearbook of Vietnam, Saigon, 1951) was incomplete by 10 percent and that the average annual rate of increase for 1938-43 was the same as that for Tonkin (16.1 per 1,000). (United Nations, Population Estimates by Sex and Age: The Population of Asia and the Far East, 1950-1980, New York, 1959).
